

## WHAT IS CLAIMED IS:

1. A statistical analysis system for use with a communication facility including remote terminal apparatus for individual callers, wherein said remote terminal apparatus may comprise a conventional telephone instrument including voice communication means, and digital input means in the form of an array of alphabetic numeric buttons for providing identification and statistical data, said control system comprising:

interface means coupled to said communication facility to interface said terminal apparatus for voice and digital communication and including means to provide signal values from data developed by said terminal apparatus said interface means further including a consumable key test means to qualify callers with respect to limited use;

voice generator means coupled through said interface means for actuating said terminal apparatus as to provide vocal operating instructions to an individual caller; and

means connected to said interface means for processing said statistical data as to isolate a subset of said individual callers.

2. A statistical analysis system for use with a communication facility including terminal apparatus for individual callers, wherein said terminal apparatus may comprise a conventional telephone instrument including voice communication means and digital input means in the form of an array of alphabetic numeric buttons for providing identification and statistical data, said control system comprising:

interface means coupled to said communication facility to interface said terminal apparatus for voice

09827644-040501  
TOSCHD-47942860

and digital communication and including means to provide signals representative of identification and statistical data developed by said terminal apparatus;

voice generator means coupled through said interface means for actuating said terminal apparatus as to provide vocal operating instructions to an individual caller;

record means connected to said interface means for initiating a file and storing data relating to specific of said callers;

means coupled to said interface means and said record means for assigning individual designations to callers and storing said designations in said record means, said designations including representations indicative of the calling order sequence of said individual callers; and

means connected to said record means for processing statistical data as to identify a subset of said individual callers.

3. A statistical analysis system for use with a communication facility including terminal apparatus for individual callers, wherein said terminal apparatus may comprise a conventional telephone instrument including voice communication means, and digital input means in the form of an array of alphabetic numeric buttons for providing identification and statistical data, said control system comprising:

interface means coupled to said communication facility to interface said terminal apparatus for voice and digital communication and including means to provide signals representative of identification and statistical data developed by said terminal apparatus;

voice generator means coupled through said interface means for actuating said terminal apparatus

005040-115922850

as to provide vocal operating instructions to an individual caller; and

manual terminal means for use by a person to communicate directly with at least one of said individual callers, said manual terminal means being coupled to said interface means and responsive to predetermined conditions to couple said manual terminal means to a caller terminal.

4. A system according to claim 3 further including means connected to said interface means for processing said statistical data as to isolate a subset of said individual callers and thereby actuate said manual terminal means.

5. A statistical analysis system for use with a communication facility including terminal apparatus for individual callers, wherein said terminal apparatus may comprise a conventional telephone instrument including voice communication means, and digital input means in the form of an array of alphabetic numeric buttons for providing identification and statistical data, said control system comprising:

interface means coupled to said communication facility to interface said terminal apparatus for voice and digital communication and including means to provide signals representative of identification and statistical data developed by said terminal apparatus;

voice generator means coupled through said interface means for actuating said terminal apparatus as to provide vocal operating instructions to an individual caller;

record means connected to said interface means for initiating a file and storing identification

098214-040501  
T05040-47342860

data and statistical data for specific callers including data developed by said terminal apparatus; means coupled to said interface means and said record means for assigning individual designations to callers and storing said designations in said record means; and means for recalling data stored in said record means in response to said individual designations.

6. A statistical analysis system for use with a communication facility including terminal apparatus for individual callers, wherein said terminal apparatus may comprise a conventional telephone instrument including voice communication means, and digital input means in the form of an array of alphabetic numeric buttons for providing identification and statistical data, said control system comprising:

interface means coupled to said communication facility to interface said terminal apparatus for voice and digital communication and including means to provide signals representative of identification and statistical data developed by said terminal apparatus;

voice generator means coupled through said interface means for actuating said terminal apparatus as to provide vocal operating instructions to an individual caller;

record means connected to said interface means for initiating a file and storing identification data and statistical data for specific callers including data developed by said terminal apparatus;

means coupled to said interface means and said record means for assigning individual designations to callers and storing said designations in said record means, said designations including representations of

0982644 040504

26 the telephone number of the terminal apparatus used by  
27 a caller; and  
28 means connected to said record means for  
29 processing statistical data as to identify a subset of  
30 said individual callers.

1 7. A statistical analysis system for use  
2 with a communication facility including terminal  
3 apparatus for individual callers, wherein said terminal  
4 apparatus may comprise a conventional telephone  
5 instrument including voice communication means, and  
6 digital input means in the form of an array of alpha-  
7 betic numeric buttons for providing identification and  
8 statistical data, said control system comprising:

9 interface means coupled to said communication  
10 facility to interface said terminal apparatus for voice  
11 and digital communication and including means to  
12 provide signals representative of identification and  
13 statistical data developed by said terminal apparatus;

14 voice generator means coupled through said  
15 interface means for actuating said terminal apparatus  
16 as to provide vocal operating instructions to an  
17 individual caller;

18 record means connected to said interface  
19 means for initiating a file and storing identification  
20 data and statistical data for specific callers inclu-  
21 ding data developed by said terminal apparatus; and

22 means coupled to said interface means and  
23 said record means for assigning individual designations  
24 to callers and storing said designations in said record  
25 means, said designations including an encrypted  
26 representation of said data developed by said terminal  
27 apparatus. .

005040-442250

1           8. A statistical analysis system for use  
2 with a communication facility including remote terminal  
3 apparatus for individual callers, wherein said remote  
4 terminal apparatus may comprise a conventional tele-  
5 phone instrument including voice communication means  
6 and digital input means in the form of an array of  
7 alphabetic numeric buttons for providing identification  
8 and statistical data and wherein said facility may  
9 provide calling terminal digital signals to a called  
10 station representative of a remote calling terminal,  
11 said control system comprising:

12           interface structure coupled to said commu-  
13 nication facility to interface said terminal apparatus  
14 for voice and digital communication and including means  
15 to provide signal values from signals representative of  
16 data developed by said terminal apparatus;

17           voice generator means coupled through said  
18 interface means for actuating said terminal apparatus  
19 as to provide vocal operating instructions to an  
20 individual caller;

21           analysis means connected for processing data  
22 from a plurality of callers in combination to isolate a  
23 select subset of said callers by interrelated proces-  
24 sing; and

25           call data analyzer structure for modifying  
26 said data from a plurality of callers under control of  
27 said terminal digital signals.

1           9. A control system according to claim 8  
2 further including record means connected to said  
3 interface means for initiating a file and storing said  
4 terminal digital signals as identification at least in  
5 part for a caller.

09827644-040501

1           10. A control system according to claim 8  
2 further including switch means whereby passage of said  
3 data from a plurality of callers to said analysis means  
4 is controlled by said terminal digital signals.

1           11. A statistical analysis system for use  
2 with a communication facility including remote terminal  
3 apparatus for individual callers, wherein said remote  
4 terminal apparatus may comprise a conventional tele-  
5 phone instrument including voice communication means  
6 and digital input means in the form of an array of  
7 alphabetic numeric buttons for providing identification  
8 and statistical data and wherein said facility may  
9 provide called terminal digital signals to a called  
10 station representative of the called station, said  
11 control system comprising:

12           interface means coupled to said communication  
13 facility to interface said terminal apparatus for voice  
14 and digital communication and including means to  
15 provide signal values from signals representative of  
16 data developed by said terminal apparatus;

17           voice generator means coupled through said  
18 interface means for actuating said terminal apparatus  
19 as to provide vocal operating instructions to an  
20 individual caller;

21           analysis means connected to said record means  
22 for processing said statistical data from a plurality  
23 of callers in combination and in accordance with a  
24 plurality of distinct formats to isolate a select  
25 subset of said callers by interrelated processing; and

26           means for actuating one of said distinct  
27 formats in accordance with said called terminal digital  
28 signals.

09827614-040501

1 12. A statistical analysis system for use  
2 with a communication facility including remote terminal  
3 apparatus for individual callers, wherein said remote  
4 terminal apparatus may comprise a conventional tele-  
5 phone instrument including voice communication means  
6 and digital input means in the form of an array of  
7 alphabetic numeric buttons for providing identification  
8 and statistical data, said control system comprising:  
9 coupling structure including a plurality of  
10 interface units each capable of accommodating a  
11 plurality of communication paths coupled to said  
12 communication facility to interface said terminal  
13 apparatus for voice and digital communication and  
14 including means to provide signal values from signals  
15 representative of data developed by said terminal  
16 apparatus;  
17 voice generator means in said interface means  
18 coupled for actuating said terminal apparatus as to  
19 provide vocal operating instructions to an individual  
20 caller;  
21 record means connected to said interface  
22 means for initiating a file and storing identification  
23 data and statistical digital data for specific callers  
24 including data developed by said terminal apparatus;  
25 and  
26 analysis means connected to said record means  
27 for processing said statistical data from a plurality  
28 of callers in combination to isolate a select subset of  
29 said callers by interrelated processing.

1 13. A system according to claim 12 further  
2 including means for queuing said remote stations to  
3 said coupling means whereas to sequence interface  
4 communications.

T05040"4TS2360

1 14. A statistical analysis system for use  
2 with a communication facility including remote terminal  
3 apparatus for individual callers, wherein said remote  
4 terminal apparatus may comprise a conventional tele-  
5 phone instrument including voice communication means  
6 and digital input means in the form of an array of  
7 alphabetic numeric buttons for providing identification  
8 and statistical data, said control system comprising:  
9 interface structure coupled to said commu-  
10 nication facility to interface said terminal apparatus  
11 for voice and digital communication and including means  
12 to provide signal values from signals representative of  
13 data developed by said terminal apparatus;  
14 voice generator means coupled through said  
15 interface means for actuating said terminal apparatus  
16 as to provide vocal operating instructions to an  
17 individual caller;  
18 analysis means connected for processing data  
19 from a plurality of callers in combination to isolate a  
20 select subset of said callers by interrelated process-  
21 ing; and  
22 qualification means for qualifying access  
23 from said remote terminal apparatus to said analysis  
24 means.

1 15. A system according to claim 14 wherein  
2 said qualification means comprises means for limiting  
3 access from a remote terminal to said analysis means on  
4 the basis of accesses per interval of time.

1 16. A system according to claim 14 wherein  
2 said qualification means comprises means for limiting  
3 access from a remote terminal to said analysis means  
4 under control of said signals representative of data  
5 developed by said terminal apparatus.

FO5040"4TS42350

1 17. A system according to claim 16 wherein  
2 said qualification means includes a look-up table.

1 18. A system according to claim 16 wherein  
2 said qualification means includes a use-rate  
3 calculator.

1 19. A statistical analysis system for use  
2 with a communication facility including remote terminal  
3 apparatus for individual callers, wherein said remote  
4 terminal apparatus may comprise a conventional tele-  
5 phone instrument including voice communication means  
6 and digital input means in the form of an array of  
7 alphabetic numeric buttons for providing identification  
8 and statistical data, said control system comprising:

9 interface structure coupled to said commu-  
10 nication facility to interface said terminal apparatus  
11 for voice and digital communication and including means  
12 to provide signal values from signals representative of  
13 data developed by said terminal apparatus;

14 voice generator means coupled through said  
15 interface means for actuating said terminal apparatus  
16 as to provide vocal operating instructions to an  
17 individual caller; and

18 analysis means connected for processing data  
19 from a plurality of callers in combination to isolate a  
20 select subset of said callers by interrelated process-  
21 ing including a display structure for visually display-  
22 ing data regarding said select subset.

1 20. A system according to claim 19 further  
2 including a printer.

09827644-040501

1           21. A statistical analysis system for use  
2 with a communication facility including remote terminal  
3 apparatus for individual callers, wherein said remote  
4 terminal apparatus may comprise a conventional tele-  
5 phone instrument including voice communication means  
6 and digital input means in the form of an array of  
7 alphabetic numeric buttons for providing identification  
8 and statistical data, said control system comprising:  
9           interface structure coupled to said commu-  
10 nication facility to interface said terminal apparatus  
11 for voice and digital communication and including means  
12 to provide signal values from signals representative of  
13 data developed by said terminal apparatus;  
14           voice generator means coupled through said  
15 interface means for actuating said terminal apparatus  
16 as to provide vocal operating instructions to an  
17 individual caller;  
18           a sequencer for developing sequence data  
19 signals as identification data;  
20           record means connected to said interface  
21 means for initiating a file and storing identification  
22 data and statistical digital data for specific callers  
23 including data developed by said terminal apparatus;  
24 and  
25           analysis means connected to said record means  
26 for processing said statistical data from a plurality  
27 of callers in combination to isolate a select subset of  
28 said callers by interrelated processing.

1           22. A statistical analysis system for use  
2 with a communication facility including remote terminal  
3 apparatus for individual callers, wherein said remote  
4 terminal apparatus may comprise a conventional tele-  
5 phone instrument including voice communication means  
6 and digital input means in the form of an array of

09827614-040501

7 alphabetic numeric buttons for providing identification  
8 and statistical data, said control system comprising:

9 interface structure coupled to said commu-  
10 nication facility to interface said terminal apparatus  
11 for voice and digital communication and including means  
12 to provide signal values from signals representative of  
13 data developed by said terminal apparatus;

14 voice generator means coupled through said  
15 interface means for actuating said terminal apparatus  
16 as to provide vocal operating instructions to an  
17 individual caller;

18 a qualification unit for developing qualifi-  
19 cation data signals as identification data;

20 record means connected to said interface  
21 means for initiating a file and storing identification  
22 data and statistical digital data for specific callers  
23 including data developed by said terminal apparatus;  
24 and

25 analysis means connected to said record means  
26 for processing said statistical data from a plurality  
27 of callers in combination to isolate a select subset of  
28 said callers by interrelated processing.

1 23. A statistical analysis system for use  
2 with a communication facility including remote terminal  
3 apparatus for individual callers, wherein said remote  
4 terminal apparatus may comprise a conventional tele-  
5 phone instrument including voice communication means  
6 and digital input means in the form of an array of  
7 alphabetic numeric buttons for providing identification  
8 and statistical data, said control system comprising:

9 interface structure coupled to said commu-  
10 nication facility to interface said terminal apparatus  
11 for voice and digital communication and including means

05040" 47942860

12 to provide signal values from signals representative of  
13 data developed by said terminal apparatus;

14 voice generator means coupled through said  
15 interface means for actuating said terminal apparatus  
16 as to provide vocal operating instructions to an  
17 individual caller;

18 a designation unit for developing designation  
19 data signals as identification data consisting of at  
20 least two data elements;

21 record means connected to said interface  
22 means for initiating a file and storing identification  
23 data and statistical digital data for specific callers  
24 including data developed by said terminal apparatus;  
25 and

26 analysis means connected to said record means  
27 for processing said statistical data from a plurality  
28 of callers in combination to isolate a select subset of  
29 said callers by interrelated processing.

1 24. A statistical analysis system for use  
2 with a communication facility including remote terminal  
3 apparatus for individual callers, wherein said remote  
4 terminal apparatus may comprise a conventional tele-  
5 phone instrument including voice communication means  
6 and digital input means in the form of an array of  
7 alphabetic numeric buttons for providing identification  
8 and statistical data, said control system comprising:

9 interface structure coupled to said commu-  
10 nication facility to interface said terminal apparatus  
11 for voice and digital communication and including means  
12 to provide signal values from signals representative of  
13 data developed by said terminal apparatus;

14 voice generator means coupled through said  
15 interface means for actuating said terminal apparatus

09827614.040501

16 as to provide vocal operating instructions to an  
17 individual caller;  
18 a sequencer for developing sequence data  
19 signals as identification data;  
20 a qualification unit for developing qualifi-  
21 cation data signals as identification data;  
22 a designation unit for developing designation  
23 data signals as identification data;  
24 record means connected to said interface  
25 means for initiating a file and storing identification  
26 data and statistical digital data for specific callers  
27 including data developed by said terminal apparatus;  
28 and  
29 analysis means connected to said record means  
30 for processing said statistical data from a plurality  
31 of callers in combination to isolate a select subset of  
32 said callers by interrelated processing.

1 25. A statistical analysis system for use  
2 with a communication facility including remote terminal  
3 apparatus for individual callers, wherein said remote  
4 terminal apparatus may comprise a conventional tele-  
5 phone instrument including voice communication means  
6 and digital input means in the form of an array of  
7 alphabetic numeric buttons for providing identification  
8 and statistical data, said control system comprising:  
9 interface structure coupled to said commu-  
10 nication facility to interface said terminal apparatus  
11 for voice and digital communication and including means  
12 to provide signal values from signals representative of  
13 data developed by said terminal apparatus;  
14 voice generator means coupled through said  
15 interface means for actuating said terminal apparatus  
16 as to provide vocal operating instructions to an  
17 individual caller;

0982644-040501

18 record means connected to said interface  
19 means for initiating a file and storing identification  
20 data and statistical digital data for specific callers  
21 including data developed by said terminal apparatus;  
22 analysis means connected to said record means  
23 for processing said statistical data from a plurality  
24 of callers in combination to isolate a select subset of  
25 said callers by interrelated processing; and  
26 a qualification unit for controlling access  
27 of callers to said analysis means in accordance with  
28 the content of said record means.

1 26. A statistical analysis system for use  
2 with a communication facility including remote terminal  
3 apparatus for individual callers, wherein said remote  
4 terminal apparatus may comprise a conventional tele-  
5 phone instrument including voice communication means  
6 and digital input means in the form of an array of  
7 alphabetic numeric buttons for providing identification  
8 and statistical data, said control system comprising:  
9 interface structure coupled to said commu-  
10 nication facility to interface said terminal apparatus  
11 for voice and digital communication and including means  
12 to provide signal values from signals representative of  
13 data developed by said terminal apparatus;  
14 voice generator means coupled through said  
15 interface means for actuating said terminal apparatus  
16 as to provide vocal operating instructions to an  
17 individual caller;  
18 a designation unit for developing designation  
19 data signals as identification data and including an  
20 encryptor; and

05040-11242860

21 analysis means connected to said record means  
22 for processing said statistical data from a plurality  
23 of callers in combination to isolate a select subset of  
24 said callers by interrelated processing.

1 27. A statistical analysis system for use  
2 with a communication facility including remote terminal  
3 apparatus for individual callers, wherein said remote  
4 terminal apparatus may comprise a conventional tele-  
5 phone instrument including voice communication means  
6 and digital input means in the form of an array of  
7 alphabetic numeric buttons for providing identification  
8 and statistical data, said control system comprising:

9 interface structure coupled to said commu-  
10 nication facility to interface said terminal apparatus  
11 for voice and digital communication and including means  
12 to provide signal values from signals representative of  
13 data developed by said terminal apparatus;

14 voice generator means coupled through said  
15 interface means for actuating said terminal apparatus  
16 as to provide vocal operating instructions to an  
17 individual caller; and

18 analysis means connected for processing data  
19 from a plurality of callers in combination to isolate a  
20 select subset of said callers by interrelated process-  
21 ing including a random number generator for selecting  
22 said subset.

1 28. A process for statistical analysis of  
2 data for use with a communication facility including  
3 remote terminal apparatus for individual callers,  
4 wherein said remote terminal apparatus may comprise a  
5 conventional telephone instrument including voice  
6 communication means and digital input means in the form  
7 of an array of alphabetic numeric buttons for providing

09827614-040501

8 identification and statistical data, said process  
9 including the steps of:  
10 interfacing said communication facility to  
11 provide voice signals and receive digital identifica-  
12 tion and answer signals representative respectively of  
13 identification data and answer data developed by said  
14 terminal apparatus under control of said caller;  
15 generating voice signals and supplying said  
16 voice signals to actuate said terminal apparatus, as to  
17 provide vocal operating instructions to a caller;  
18 providing sequence signals representative of  
19 sequence data indicating the time sequence of a call  
20 with reference to the calls from other callers;  
21 qualifying callers based on said digital  
22 identification signals;  
23 designating callers based on said digital  
24 identification signals;  
25 initiating files and storing data from  
26 qualified callers including, (1) answer data for  
27 specific callers as indicated by said answer signals,  
28 (2) sequence data as indicated by said sequence signals  
29 and (3) identification data as indicated by said  
30 identification signals;  
31 providing external data signals represen-  
32 tative of external data distinct from said answer data  
33 provided from said callers; and  
34 comparing said answer data from said callers  
35 and analyzing said answer data with said external data  
36 in combination to isolate a select subset of said  
37 callers.
